

CRYOPRESERVED CORD TISSUE INJECTABLE

BIOLOGICAL INJECTABLE FOR INTRA-ARTICULAR JOINTS

WHY CORD TISSUE?

Cord tissue is derived from human umbilical cord which is a rope-like structure that connects the fetus to the placenta. Its benefits and properties provide a wide variety of therapeutic applications in regenerative medicine. It contains higher concentrations of heavy chain-hyaluronic acid (HA) compared to amniotic membrane tissue.

NATURAL

SurCord® is manufactured from cord tissue taken from donated human placental tissue

HEAVY CHAIN-HA

Research shows heavy chain-hyaluronic acid provides joint lubrication and protection

CRYOPRESERVED

Cryopreserving the allografts preserves the tissue's therapeutic benefits.

IMMUNE EVASIVE

Cord tissue is immune evasive, making it ideal for injection without adverse reactions

WHY SURCORD®?

Unmatched quality standards coupled with innovative science sets us apart.

SurCord® is produced using the Excellion Process®. This process extracts the cord tissue from the placental tissue, which is then processed into an injectable product. This process is a highly manual and surgical harvesting procedure regulated under Section 361 of the Public Health Service Act. SurCord®'s minimally manipulated process retains the therapeutic properties of the cord tissue so that it can be used in a variety of treatment applications with ease. This process generates the highest quality cord tissue product on the market.

Product Information

Learn more about SurCord[®]

SurCord[®] is regulated under Section 361 of the Public Health Service Act and is intended for homologous use.

SurCord[®] Applications

- + Orthopaedics
- + Podiatry
- + Sports Medicine
- + Pain Management

Potential SurCord[®] Benefits

Natural
Cryopreserved
Immune-Evasive

What is SurCord[®]?

SurCord[®] is an injectable cord tissue allograft that is derived from a donated placenta obtained via C-section delivery. It is cryopreserved to retain its therapeutic properties and benefits of the umbilical cord.

Is SurCord[®] Safe?

SurCord[®] is thoroughly tested for safety and efficacy. We pride ourselves on safety standards that exceed regulatory requirements by performing additional serological and endotoxin tests missed by our competitors.

Vial Sizes

SurCord[®] comes in multiple vial sizes tailored to a variety of injection locations

Vials shown are not to scale

Inspected for Quality

All vials are measured using a calibrated electronic pipette, and quality individually inspects all filled vials to ensure they meet our unparalleled standards.

Extensive donor screening to ensure safety

Screening

1

2

Birth

All tissue collected from Caesarian section births to ensure quality and safety

Tissue is delivered on ice to the lab within 1-24 hours

Recovery

3

4

Processing

Tissue is cleaned and the cord tissue is processed using our Excellion[®] Process

Rigorous serological testing by third party lab to ensure safety

Testing

5

6

Storage

SurCord[®] is cryopreserved and stored in liquid nitrogen tanks

Priority overnight shipping on dry ice to preserve the product
